

WHERE OUR POWER COMES FROM

Maryland doesn't make all its power.

For every 10 lights on in Maryland...

6 are powered by electricity **made here** in Maryland

4 are powered by electricity **brought in** from other states

We're plugged into one big shared grid

It's called **PJM**. It links 13 states and Washington, D.C.

The upside

If we need more power, neighbors can send it.

The catch

Problems and price jumps elsewhere can reach our bills.

Power decisions in Maryland affect our neighbors — and theirs affect us.

Based on 2024 totals: about 35 of the 59 billion kWh Marylanders used were made in-state. Sources: U.S. EIA Maryland Electricity Profile 2024; PJM.
